

# Know how good you are

– use Trueflaw POD analysis service

Probability of detection (POD) is the gold standard for NDT reliability. Traditionally, it's been difficult, expensive and rarely used. Now it is easy. With Trueflaw POD evaluation service.

## You inspect – we'll do the rest

Trueflaw POD evaluation service makes POD easy and affordable. Trueflaw representative comes to your premises with suitable sample-set. You do the inspection. We administer the process, collect the data, perform the statistical analysis and report the results (ASTM-E2862). And it's fast. With our semi-automated analysis, you'll get the preliminary results by the next morning.

## What's the smallest flaw you can find?

No, it's not the smallest flaw you've seen. It's not the smallest flaw your method can find. It's not the flaw that is sufficiently above noise. This is a trick question. What they really want to know is, what can you **reliably** find. This is not the same thing. This is what we need the POD testing to tell us.

## Your POD is one email away

To get started, contact Iikka Virkkunen ([iikka.virkkunen@trueflaw.com](mailto:iikka.virkkunen@trueflaw.com)) and set the date.
